

Morecambe FC recently developed a new stadium to replace their aging ground and enable them to cater for the requirements of modern day catering and function needs for various events. PAS were approached by the security contractor for the project to help develop a new Voice Alarm and Public Address system for the entire ground and internal areas.

PAS helped the club financially by incorporating some of the former PAVA equipment from the old ground into the new system and expanded the coverage throughout the stadium. Working alongside the M&E and security teams, we overcame numerous installation issues with a large site like this and completed the project on time and budget.

Additional systems were developed for the internal function suites which cater for a wide variety of events, by utilising a digital audio mixer and wireless microphones, we delivered a flexible solution which meets most requirements and provides high quality sound in a simple to use fashion. Match announcements and music are now made with high quality and intelligibility.

Client: Morecambe FC

Contractor: Globe Construction

M&E Contractor: Barrett M&E

Security Contractor: ADT

Systems:
Match Music & Announcements
Public Address/Voice Alarm
Function Suites Sound
Induction Loops
