

PAS have recently completed the contract for a new leisure centre & pool on Merseyside. Working closely with the consultants Liverpool 2020 at the outset, we developed PA systems for the site which allow staff to communicate quickly and effectively around the building.

The centre has a six zone system which is arranged to enable music and announcements to be made to any area on an individual, collective or “all call” basis.

The main pool and sports hall have local input sockets available for use in swimming galas and events for local announcements and playback of music. These functions can take place without interrupting other areas of the centres which would operate as normal. Two dance studios have separate music systems installed which are overridden with emergency messages and muted when the fire alarm is activated.

The pool alarm is connected to the PA system which broadcasts emergency announcements throughout the centre to summon staff in the event of an emergency.

The building adjoins a new school and library on the same site which we carried out similar sound system installations at the same time for Morgan Sindall Construction. Staff at the new centres are pleased with the systems which operate satisfactorily and meet their operational requirements for day to day and special events.

Client: Knowsley Council

Contractor: Morgan Sindall

M&E Contractor: A&B Engineering
